

System description:

1. Description for whole system.

This project of an embedded security door lock system is described with the help of a digital lock that is interfaced with a microcontroller. The principle aim of this embedded security door lock system is to enable a door with a security password and fingerprints .

For this purpose, a power supply is intended for the complete security door circuit & microcontroller which are appropriate for the mechanism of the circuit. The other required devices in this project are a DC motor, buzzer , a keypad to enter the password& fingerprint sensor .

To enter the door or exit its power supply is required, for entering “*” has to be pressed while for closing “#” has to be pressed. After pressing * or # password needs to be punched or right fingerprint . If the password matches the one entered in the microcontroller or the right finger then the microcontroller will pass the command and the door will be opened or locked. The password can be reset in the microcontroller.

2. System Architectural Pattern is Monolithic.

3. System Constrains

Layered Architecture

1. Layered Architecture diagram

2. Layer descriptions:

i. MCAL :

Consist from 4 modules

A. USART for data transmission between fingerprint and microcontroller

B. PWM to control DC motor

C. Timer for delay

D. DIO to control pins

ii. On-bord

Consist from 4 modules

- A. Finger print : read finger and sent it to USART
- B. DC motor to open the door
- C. Keypad enter pass word and chick it
- D. Buzzer to make sound

iii. Application layer

3. Layer type all of them are close

SW Data Type Tables

1. Global value

| | |
|-------------|----------------------|
| Name | Data_read |
| Type | Static uint8 |
| Range | 8byit |
| Discription | Read data from eerom |

| | |
|-------------|----------------------------|
| Name | Data_recored |
| Type | Static uint8 |
| Range | 8byit |
| Discription | Read data from fingerprint |

SW layer

1. MCAL

A. DIO

a. Description : to initialize the pin as in input or output and read or write in pin

b. APIs:

| | |
|-------------|-------------------------|
| Name | Port_name |
| Type | Unsigned char |
| Range | 0:8 |
| Description | Port name in contraller |

| | |
|-------------|--------------------|
| Name | Pin_number |
| Type | Unsigned char |
| Range | 0:8 |
| Description | pin number in port |

| | |
|-------------|---------------------|
| Name | value |
| Type | Unsigned char |
| Range | 0:8 |
| Description | Read or write value |

c.

| | | | |
|---------------|--|----------------------|---------------|
| Function name | DIO_intial | | |
| Argument | input | Port_name | Unsigned char |
| | | What port I will use | |
| | | Pin number | Unsigned char |
| | | What pin I will use | |
| | | direction | Unsigned char |
| | Set it as input or out put | | |
| | Output | No output | |
| return | No return | | |
| Synchronous | yes | | |
| Reentrant | yes | | |
| Description | Set pin and port ,write on pin, read from port | | |

| | | | |
|---------------|-------------|----------------------|------------------------|
| Function name | DIO_write | | |
| Argument | input | Port_name | Unsigned char |
| | | What port I will use | |
| | | Pin number | Unsigned char |
| | | What pin I will use | |
| | | value | Unsigned char(pointer) |
| | Write 1or 0 | | |
| | Output | No output | |
| return | No return | | |
| Synchronous | yes | | |
| Reentrant | yes | | |
| Description | Write 1or 0 | | |

| | | | |
|---------------|----------------|----------------------|------------------------|
| Function name | DIO_read | | |
| Argument | input | Port_name | Unsigned char |
| | | What port I will use | |
| | | Pin number | Unsigned char |
| | | What pin I will use | |
| | | value | Unsigned char(pointer) |
| | Read pin value | | |
| | Output | The value of pin | |
| return | No return | | |
| Synchronous | yes | | |
| Reentrant | yes | | |
| Description | Read from pin | | |

B. Timer

a. Description:set timer

b. APIS:

| | |
|-------------|-------------------------------|
| Name | timerConfig |
| Type | Structure |
| Range | 0:28 |
| Description | Timer number ,mode ,prescaler |

c. APIS tables:

| | | | |
|---------------|-------------|-------------------------------|-----------|
| Function name | Timer_start | | |
| Argument | input | Timer_con | Structure |
| | | Timer number ,mode ,prescaler | |
| | Output | No output | |
| return | No return | | |
| Synchronous | yes | | |
| Reentrant | no | | |
| Description | Write 1or 0 | | |

| | | | |
|---------------|-------------|-------------------------------|-----------|
| Function name | Timer_stop | | |
| Argument | input | Timer_con | Structure |
| | | Timer number ,mode ,prescaler | |
| | Output | No output | |
| return | No return | | |
| Synchronous | yes | | |
| Reentrant | no | | |
| Description | Write 1or 0 | | |

C. PWM

a. Description : motor controller

b. APIS:

| | |
|-------------|--|
| Name | PWM_con |
| Type | enum |
| Range | 1:9 |
| Description | start a PWM signal with the specified frequency and duty cycle |

| | |
|-------------|--------------|
| Name | a_pwm_config |
| Type | enum |
| Range | 0:8 |
| Description | Stop PWM |

| | |
|-------------|-------------------------------------|
| Name | ch |
| Type | enum |
| Range | 0:8 |
| Description | changing the duty cycle of specific |

| | |
|-------------|------------|
| Name | duty |
| Type | foalt |
| Range | 0:8 |
| Description | Duty cycle |

c.

| | | | |
|---------------|--|------------------------------------|------|
| Function name | PWM_start | | |
| Argument | input | a_pwm_con | enum |
| | | specified frequency and duty cycle | |
| | Output | No output | |
| return | No return | | |
| Synchronous | yes | | |
| Reentrant | yes | | |
| Description | start a PWM signal with the specified frequency and duty cycle | | |

| | | | |
|---------------|-----------|---------------|------|
| Function name | PWM_stop | | |
| Argument | input | chanal | enum |
| | | Chanal of PWM | |
| | Output | No output | |
| return | No return | | |
| Synchronous | yes | | |
| Reentrant | yes | | |
| Description | Stop PWM | | |

| | | | |
|---------------|----------------------|------------------|--------|
| Function name | PWM_change_DutyCycle | | |
| Argument | input | Channel | enum |
| | | Selet timer pin | |
| | | duty | Uint16 |
| | | New cycle number | |
| | Output | The value of pin | |
| return | No return | | |
| Synchronous | yes | | |
| Reentrant | yes | | |
| Description | Read from pin | | |

D. USART

a. Description :use to read and write in eeprom

b.

| | |
|-------------|-----------|
| Name | data |
| Type | Uin8 |
| Range | 1:9 |
| Description | Sent char |

| | |
|-------------|----------------|
| Name | size |
| Type | uint |
| Range | 0:8 |
| Description | Size of string |

| | |
|-------------|-------------------------|
| Name | Re_cor |
| Type | Uin8 |
| Range | 0:8 |
| Description | Recorded data in eeprom |

c.

| | | | |
|---------------|--|--------------|------|
| Function name | UART_transmit | | |
| Argument | input | data | Uin8 |
| | | Reserve data | |
| | Output | No output | |
| return | No return | | |
| Synchronous | yes | | |
| Reentrant | yes | | |
| Description | start a PWM signal with the specified frequency and duty cycle | | |

| | | |
|---------------|--------------|-----------|
| Function name | UART_receive | |
| Argument | input | No input |
| | Output | No output |
| return | Resaved data | |
| Synchronous | yes | |
| Reentrant | yes | |
| Description | Stop PWM | |

| | | | |
|---------------|---------------------|------------------------|-------|
| Function name | UART_transmitString | | |
| Argument | input | data | Uint8 |
| | | Data resave | |
| | | size | Uint8 |
| | | Size of sending resave | |
| | Output | No output | |
| return | No return | | |
| Synchronous | yes | | |
| Reentrant | yes | | |
| Description | Read from pin | | |

| | | | |
|---------------|--------------------|------------------------|-------|
| Function name | UART_receiveString | | |
| Argument | input | Drec_data | Uint8 |
| | | Data recored | |
| | | size | Uint8 |
| | | Size of sending resave | |
| | Output | No output | |
| return | No return | | |
| Synchronous | yes | | |
| Reentrant | yes | | |
| Description | Read from pin | | |

2. On-Bored

A. EErom

a. Description : read and write from EErom

b.

| | |
|-------------|-------------|
| Name | addr |
| Type | Uinte16 |
| Range | 0:8 |
| Description | Give adress |

| | |
|-------------|-----------------|
| Name | data |
| Type | Uinte8(pointer) |
| Range | 0:8 |
| Description | Hold data |

| | |
|-------------|--------------|
| Name | Size |
| Type | Uinte16 |
| Range | 0:8 |
| Description | Size of data |

| | |
|-------------|---------------|
| Name | Received_data |
| Type | Uinte8 |
| Range | 0:8 |
| Description | Read data |

d.

| | | |
|---------------|--|-----------|
| Function name | EEPROM_init | |
| Argument | input | No input |
| | Output | No output |
| return | No return | |
| Synchronous | yes | |
| Reentrant | yes | |
| Description | Set pin and port ,write on pin, read from port | |

| | | | |
|---------------|-----------------|---------------------|--------|
| Function name | EEPROM_write | | |
| Argument | input | addr | Uint16 |
| | | Address to put data | |
| | | data | Uint8 |
| | | Data to put | |
| | | size | Uint16 |
| | Size of data | | |
| | Output | No output | |
| return | No return | | |
| Synchronous | yes | | |
| Reentrant | yes | | |
| Description | Write in EEprom | | |

| | | | |
|---------------|----------------|---------------------|--------|
| Function name | EEPROM_read | | |
| Argument | input | addr | Uint16 |
| | | Address to put data | |
| | | reciveed | Uint8 |
| | | Data to out | |
| | | size | Uint16 |
| | | Size of data | |
| | Output | No output | |
| return | No return | | |
| Synchronous | yes | | |
| Reentrant | yes | | |
| Description | read in EEprom | | |

B. Keypad

- Description: control Keypad
- APIS: No API data table
- APIS tables:

| | | |
|---------------|---------------------------------|-----------|
| Function name | KEYPAD_pressposition | |
| Argument | input | No input |
| | Output | No output |
| return | The position of the pressed key | |
| Synchronous | yes | |
| Reentrant | no | |
| Description | Get the pressed key position | |

| | | |
|---------------|------------------------------|-----------|
| Function name | KEYPAD_keyReleased | |
| Argument | input | No input |
| | Output | No output |
| return | 0 / 1 | |
| Synchronous | yes | |
| Reentrant | yes | |
| Description | See if key is pressed or not | |

| | | |
|---------------|-------------------------|-----------|
| Function name | KEYPAD_getCharacter | |
| Argument | input | No input |
| | Output | No output |
| return | No return | |
| Synchronous | yes | |
| Reentrant | yes | |
| Description | Get pressed key as char | |

| | | |
|---------------|-------------------------|-----------|
| Function name | KEYPAD_getNumber | |
| Argument | input | No input |
| | Output | No output |
| return | Get pressed key number | |
| Synchronous | yes | |
| Reentrant | yes | |
| Description | Get pressed key as char | |

C. Motor

a. Description : control motor

b. APIS:

| | |
|-------------|-------------------------|
| Name | Motorconf |
| Type | structure |
| Range | 1:4 |
| Description | have pins,PWM,direction |

| | |
|-------------|-------------|
| Name | speed |
| Type | Uinte8 |
| Range | 0:8 |
| Description | Motor speed |

| | |
|-------------|------------------|
| Name | direction |
| Type | enum |
| Range | 0:1 |
| Description | Motor dicrection |

c.

| | | | |
|---------------|------------------|-----------------------------|-----------|
| Function name | Motor_int | | |
| Argument | input | Motor_config | Structure |
| | | Moter pin ,direction &speed | |
| | Output | No output | |
| return | No return | | |
| Synchronous | yes | | |
| Reentrant | yes | | |
| Description | Initialize moror | | |

| | | | |
|---------------|-------------|-----------------------------|-----------|
| Function name | Motor_start | | |
| Argument | input | Motor_config | Structure |
| | | Moter pin ,direction &speed | |
| | | speed | Uinte8 |
| | | Motor speed | |
| | Output | No output | |
| return | No return | | |
| Synchronous | yes | | |
| Reentrant | yes | | |
| Description | Set motor | | |

| | | | |
|---------------|------------|-----------------------------|-----------|
| Function name | Motor_stop | | |
| Argument | input | Motor_config | Structure |
| | | Moter pin ,direction &speed | |
| | Output | No output | |
| return | No return | | |
| Synchronous | yes | | |
| Reentrant | yes | | |
| Description | Stop motor | | |

| | | | |
|---------------|-----------------------|--------------|-----------|
| Function name | MOTOR_changeDirection | | |
| Argument | input | Motor_config | Structure |

| | | | |
|-------------|------------------------|-----------------------------|------|
| | | Moter pin ,direction &speed | |
| | | dir | enum |
| | Output | No output | |
| return | No return | | |
| Synchronous | yes | | |
| Reentrant | yes | | |
| Description | Change motor direction | | |

E. Finger print

a. Description :use to read fingerprint

d.

| | |
|-------------|--------------------|
| Name | data |
| Type | Uinte8 |
| Range | 1:9 |
| Description | Sent data to usart |

| | |
|-------------|-------------------|
| Name | leanth |
| Type | Uinte8 |
| Range | 0:8 |
| Description | Leath of the data |

| | |
|-------------|-----------------------------|
| Name | code |
| Type | Uinte8_t |
| Range | 0:8 |
| Description | Code for the sensor respond |

| | |
|-------------|------------------------------------|
| Name | Buff_id |
| Type | Uinte16_t |
| Range | 0:8 |
| Description | The id of data to send in USRAT |

| | |
|-------------|---|
| Name | location |
| Type | Uin16_t |
| Range | 0:8 |
| Description | The place where the data storage in EErpm |

e.

| | | |
|---------------|--|-----------|
| Function name | sendcmd2fb | |
| Argument | input | comand |
| | Output | No output |
| return | Sucssed | |
| Synchronous | no | |
| Reentrant | no | |
| Description | Contorall fingerprint and display in LCD | |

| | | |
|---------------|--------------------------------------|-----------|
| Function name | GET_id | |
| Argument | input | No input |
| | Output | No output |
| return | ids | |
| Synchronous | No | |
| Reentrant | No | |
| Description | Open finger print to save new finger | |

| | | |
|---------------|-----------------------|-----------|
| Function name | enrol | |
| Argument | input | No input |
| | Output | No output |
| return | No | |
| Synchronous | no | |
| Reentrant | No | |
| Description | Save new finger print | |

| | | |
|---------------|--|-----------|
| Function name | search | |
| Argument | input | No |
| | Output | No output |
| return | Finger id | |
| Synchronous | No | |
| Reentrant | No | |
| Description | See if the data have the finger or not | |

F. lcd

a. Description :LCD contraller

b.

| | |
|-------------|----------------|
| Name | X,y |
| Type | Int |
| Range | 0:8 |
| Description | Where to write |

| | |
|-------------|---------------|
| Name | string |
| Type | char |
| Range | 0:100 |
| Description | Data to write |

c.

| | | |
|---------------|---------------|-----------|
| Function name | LCD_INTIAL | |
| Argument | input | no |
| | Output | No output |
| return | No | |
| Synchronous | yes | |
| Reentrant | yes | |
| Description | Make lcd work | |

| | | |
|---------------|--------------------------------------|-----------|
| Function name | writeString | |
| Argument | input | string |
| | Output | No output |
| return | no | |
| Synchronous | yes | |
| Reentrant | yes | |
| Description | Open finger print to save new finger | |

| | | |
|---------------|---------------------|-----------|
| Function name | Setplace | |
| Argument | input | x,y |
| | Output | No output |
| return | No | |
| Synchronous | no | |
| Reentrant | No | |
| Description | Set LCD write place | |

| | | |
|---------------|----------|-----------|
| Function name | Delete | |
| Argument | input | No |
| | Output | No output |
| return | no | |
| Synchronous | No | |
| Reentrant | No | |
| Description | deletLCD | |
